

Women360

A Cloud-Native Women's Health & Wellness SaaS Application

REVIEW 1

Pavithra Uthrah R. K.

Women360 at a Glance

A modern, unified SaaS platform empowering women to track, understand, and optimize their health across every stage of life.

- ✓ **Unified Ecosystem:** Replaces fragmented single-purpose trackers with an all-in-one health suite.
- ✓ **Multi-Role Access:** Dedicated interfaces for Women (Users), Wellness Coaches, and Administrators.
- ✓ **Cloud-Native SaaS:** Secure, scalable infrastructure with multi-tenant data protection.
- ✓ **Lifelong Adaptability:** Features specialized interfaces including Senior Mode for older adults.

Problem Statement

Fragmented Health Tracking

Women are forced to use multiple standalone apps for cycle tracking, nutrition, mental health, and physical activity, leading to scattered personal health data.

Lack of Holistic Insights

Isolated tools fail to correlate lifestyle habits with menstrual cycles, mood swings, or sleep quality, preventing women from understanding overarching health patterns.

Accessibility Barriers

Existing applications cater predominantly to younger demographics, neglecting older adults who experience cognitive or visual friction with dense app designs.

Existing System Landscape

Disconnected Niche Apps

Current solutions operate in silos. A user maintains separate accounts for menstrual logs, calorie counters, and meditation apps with zero data interoperability.

Result: Data friction, high user drop-off, and incomplete health context.

Manual Paper & Static Logs

Many women still rely on paper journals or static physical notes to track health symptoms, making long-term analysis and medical reporting virtually impossible.

Result: Lost records, lack of reminders, and no expert consultation loop.

Limitations of Current Approaches

Domain Area	Existing App Limitations	Impact on Women's Health
Data Continuity	Siloed databases with no central export or unified timeline	Inability to present accurate health history to doctors or coaches
Interpersonal Loop	No native channel for expert coaching or administrative support	Users lack professional guidance when abnormal symptoms appear
Interface Flexibility	Static, cluttered screens optimized only for tech-savvy users	Older women face severe cognitive overload and navigation friction
Security & Roles	Basic consumer apps lack robust role-based access control	Privacy concerns when sharing sensitive reproductive data

Proposed System — Women360

A cloud-native SaaS solution bringing all dimensions of women's health into one intelligent ecosystem.

Core Tracking Suite

Menstrual health cycles, physical activity, nutrition intake, sleep patterns, and mental wellbeing logs in one unified dashboard.

Analytics & Reports

Visual trend analytics generating actionable insights and exportable wellness summaries for expert consultation.

Coach & Admin Portal

Role-based access permitting certified wellness coaches to guide users and administrators to govern system security.

Women360 Value Proposition

100%

Unified Health Ecosystem

Track → Understand → Improve seamlessly in a single cloud platform.

-  **End-to-End Visibility:** Correlate cycle phases with energy, mood, and sleep quality.
-  **Cloud Scalability:** Securely stored on cloud infrastructure with high availability.
-  **Adaptive Experience:** Seamless transition between Standard Mode and Senior Mode.
-  **Granular Governance:** Multi-tenant privacy safeguards sensitive user metrics.

Project Scope Boundaries

✓ IN SCOPE

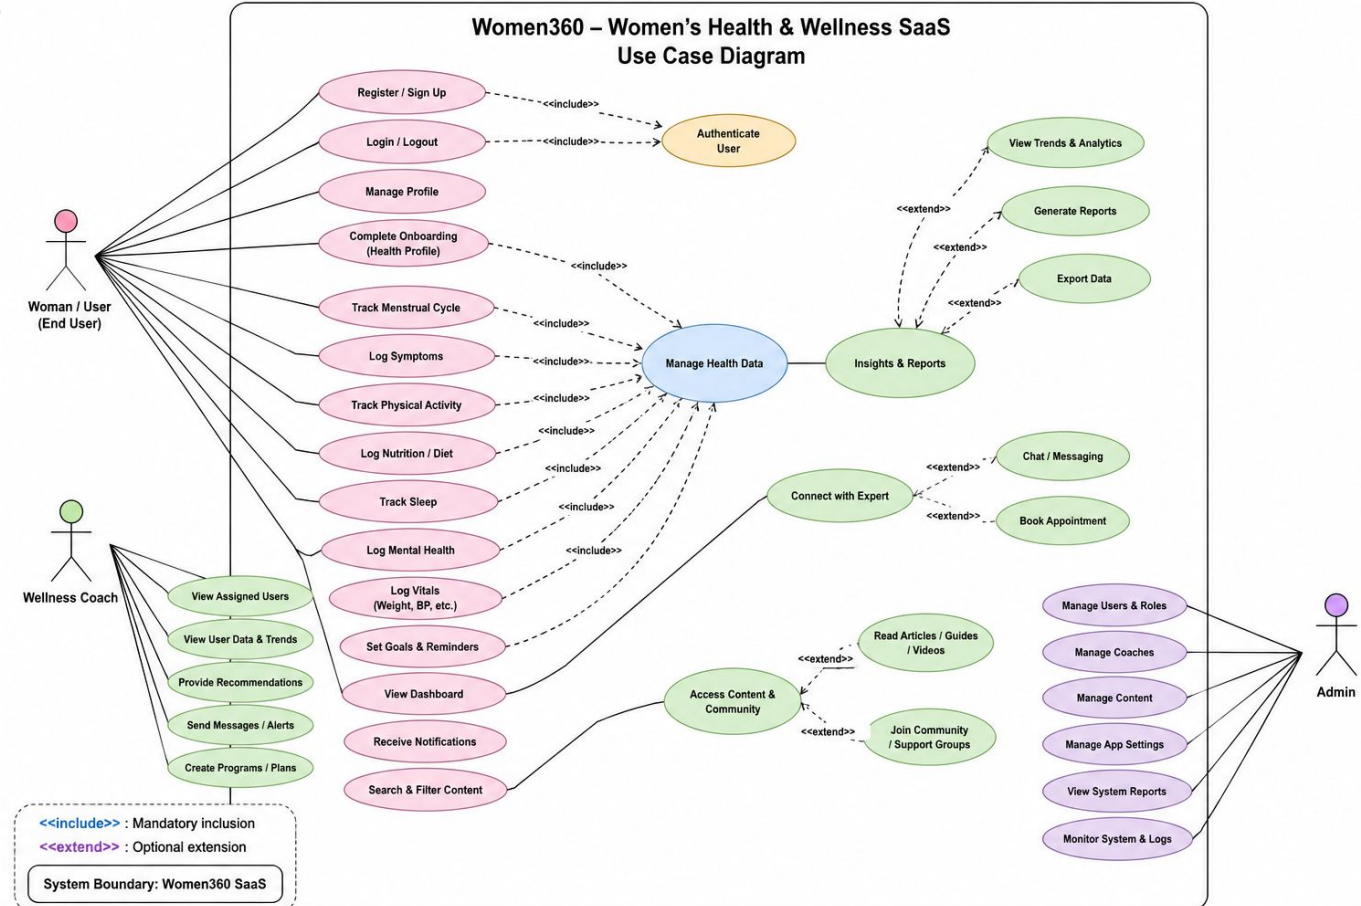

- ✓ Web and responsive mobile-accessible SaaS portal.
- ✓ Health modules: Cycle, Nutrition, Activity, Sleep, Wellbeing.
- ✓ Dual-mode interface (Standard & Senior Mode).
- ✓ Multi-role access (End User, Wellness Coach, Admin).
- ✓ Cloud database integration and analytics reports.

Use Case Diagram

System Interaction Model

-  **Woman / End User:** Logs daily health metrics, views trend dashboards, switches UI modes, interacts with coaches.
-  **Wellness Coach:** Reviews user health trends, sends customized wellness recommendations and guidance
-  **System Administrator:** Manages accounts, configures roles, monitors cloud system health and security compliance.

Senior Mode — Key Product USP

DIFFERENTIATOR SHOWCASE

Designed for Every Stage of Life

One platform. Two experiences. Senior Mode transforms the interface for older adults requiring enhanced accessibility.

- ✓ **High-Contrast Typography:** Massive touch targets and simplified text.
- ✓ **Essential Navigation:** Focuses only on critical daily health functions.
- ✓ **Customizable Essentials:** Tailor shortcuts for medicines and appointments.
